

ARO Provenair Cylinder Mounting Options:

Looking at the ARO Provenair cylinder model number sequence, the tenth digit identifies the type of mount being used. There are two options when selecting the MS4 mount. This article discusses both options.

ANAQK-ABBAB-030: this is a 1 1/2" bore x 3" stroke cylinder.

Option "B" provides the MS4 (side-tapped) mounting option. An alternative would be to use "4" as the mounting option.

Option "4" provides both the MS4 and the FMB (female retaining bolts) mounting configurations. Should the customer later choose to use a detachable flange kit, or to panel mount the cylinder, they can do so using the female retaining bolts in this option.

This photo compares the "4" and "B" mounting options.
