

Locating the Model Number on a 1/2" Diaphragm Pump

Question:

Where is the model number on my 1/2" diaphragm pump?

Answer:

Center section of 1/2" diaphragm pump is black. You will find the model number etched on the top portion of the center section. This will be located toward the exhaust side of the pump.

Dirt, or dust, on the pump center body can hide the etching. The customer may need to clean off dust, or dirt, for etching to be legible.

This photo shows a well-used 1/2" ARO diaphragm pump. The arrow points to where you can find the model number. This is a good example of why the model number can be difficult to find and read.

If fluid caps are tan, or a light gray color, the model number may be similar to 66605J-344 or 666053-3EB.
